- Website Design
- Database integration
- Domain Name Registration
- e-Commerce
- e-Letters
- Reliable Hosting Services
- Graphic Design
- Content Management Systems (CMS)
- CD-Rom / Multimedia

### Design & Development

At OceanWeb we pride ourselves on effective and stylish website design and development. Our in-house designers work hard to create fresh and welcoming designs with clean, easy to follow navigation to suit the needs of our customers.

Pages are constructed to ensure quick download times delivering good performance for all connection speeds. We will also ensure that your website is designed to World Wide Web Consortium guidelines as well as for maximum search engine performance based on the content supplied, though we can also offer advice on improving this. As part of the design service, we will register your site with all of the major search engines.

### e-Commerce

This enables a company to sell its products and services entirely online. Having chosen a product they wish to purchase, a customer can then order and pay for it securely online.

OceanWeb uses award winning Actinic technologies to design and deploy e-Commerce solutions. We work with the client to develop a design that provides them with a feature rich website that has the ability to take payments online for products or services.

### Management & Hosting

We offer a complete web management service including full domain administration and high quality hosting on our dedicated servers. Also, should our customers want a content management system that allows them to easily alter the content of their website, we can design a system to suit your needs. Alternatively should you wish for OceanWeb to make any alterations to content we are pleased to provide a quick and efficient update service.
